

EXPERIENCE THE ONLY PARTICULATE BARRIER HOOD THAT FEELS BARRIER-LESS

UL CERTIFIED TO NFPA 1971, 2018 EDITION

PGI Gold FR Fabric

Proprietary PGI Gold FR fabric for excellent heat, flame and thermal resistance with superior tensile and tear strength for longer wear life. Attractive gold color allows user to easily detect soiling and initiate cleaning.

Hear the Difference

Unlike laminated PTFE barrier hoods, BarriAire™ Gold Hoods are quiet and allow excellent hearing. Laminated PTFE hoods are loud and make a crackling noise with virtually every movement, adversely affecting communication and situational awareness.

ID Label

UL Certified FR label facilitates tracking and identification through barcoding, sequential numbering and personalization.

Stronger Stitching

All sewing and quilting done with CRAQ SPUN® AR meta-aramid thread which has twice the strength of typical meta-aramid thread. Quilting stabilizes and enhances particulate barrier durability.

Particulate Blocking Power

Lightweight inner layer of DuPont™ Nomex® Nano Flex fabric inhibits penetration of harmful contaminants and carcinogenic particulates between 0.1 and 1.0 microns.

Nomex Nano Flex

Exclusive DWR Finish

Outer shell has durable water repellent finish for superior soil and water repellency with outstanding stain-release performance. Reduces build-up of toxic residue that is easily absorbed by non-treated fabrics and allows hood to dry 2x-3x faster.

Exceptional Breathability and Comfort

Unlike PTFE particulate barrier hoods, which have virtually no breathability and lock in moisture and air like a plastic bag, PGI's BarriAire™ Gold Hoods have excellent breathability, reducing the potential for heat stress while pulling moisture away from the skin to the outer shell where it can evaporate keeping you drier.
