

CMC TRISKELION™

The CMC Triskelion is the first industrial rescue tripod certified to NFPA standards. With a working height of 5.5-10 ft, the Triskelion adapts to fit low-clearance areas and extends to haul patients in full-size litters. Additionally certified to EN 795 and CEN/TS 16415, the Triskelion's modern design sets a new benchmark for versatility, ease of use, and rapid deployment in confined space and industrial rescue operations.

10 ft Max Height

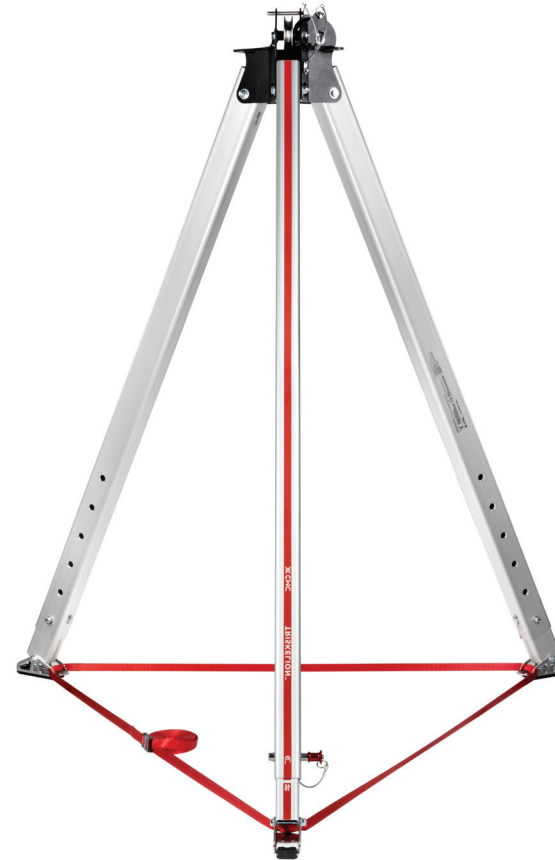

Rapid Deployment

NFPA G-rated

FEATURES

- Third-party certification to NFPA General Use, EN 795, and CEN/TS 16415 assures the Triskelion meets the minimum breaking strength of each standard.
- 10 ft max working height allows rescuers to haul patients from a confined space using a harness or litter and 5.5 ft min working height facilitates access in low-clearance areas. 4 in leg increments help fine tune tripod height.
- Rectangular legs with built-in stoppers, tethered push pins, and high contrast graphics allow teams to quickly and easily align adjustment holes and set the desired height.
- Includes leg packing strap and reinforced carry bag with diagram for proper packing, easily carried by two people using end handles or a single person using the padded center shoulder strap.
- Supported by custom accessories that enhance its capabilities and make it even easier to use including Triskelion Winch Adapters, Foot Steps, and Ground Stakes.
- A single red webbing hobble strap secures all three legs at the base with a quick-connect Cobra Buckle, creating a system that is easier to see and lighter weight than chain, and faster than using multiple lengths of material.
